

1. Rebelmouse creates its own user id when the candidate gets synced to RM. Can you use the user id that we send as user id?
2. If you cannot use the user id that we send, during SSO can you send us a response with user details and user id that you create. We will handle redirection on our side.
3. We need to know how to send our avatar link to them and maybe some other information like the user's job title. We can send this info during SSO.
4. What is the difference between user id and owner id? How is author and owner id related?
5. Difference between Posts vs Talks. I don't see an option to add talk under any section. And I don't see an option to add comments to a Post.
6. 418 error on create message

The screenshot shows a REST client interface for a POST request to `https://ptf-communities.rebelmouse.dev/core/v1/talks/post:2659838283:comments/messages`. The request body is a JSON object:

```
1 {
2   "text": "Test Comment 1",
3   "auth_token_type": "jwt",
4   "auth_token": "user_id:26240595"
5 }
```

The response status is 418 (I'm a Teapot) with a time of 332 ms and a size of 790 B. The response body is a JSON object:

```
1 {"message": "Sorry, you don't have permissions for this operation", "session_invalid": true}
```

7. List of errors that API could send.
